

Mobile Device Management Solution for Healthcare

Changing the face of the Patient Care through Mobility

THE HEALTHCARE CHALLENGE

However great the gains, mobility pose serious challenges for healthcare organizations facing HITECH and HIPAA regulations. Whether its doctors accessing real time information, treatment nurses maintaining patient records or tracking inventory, or emergency physicians working outside the hospitals, access to critical information must be secured.

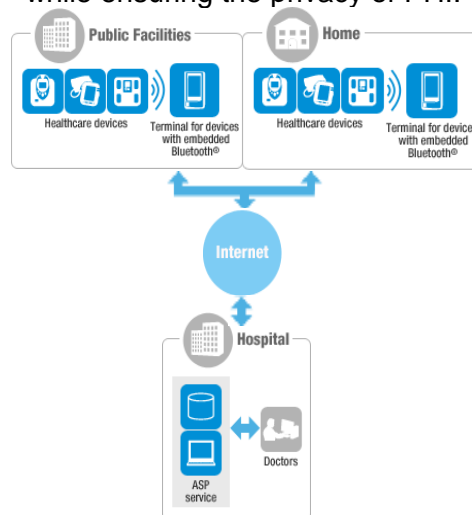

Why Notify Technology?

Comprehensive Enterprise Mobility offering, including MDM, a Secure Workspace for BYOD and support for Mobile Application Management.

MOBILE DEVICE MANAGEMENT FOR HEALTHCARE

NotifyMDM offers a simplified solution for the healthcare market giving a real added value for operational management.

Traditionally MDM is usually associated as pure IT project, NotifyMDM for Healthcare is now dedicated to help clinicians do their daily tasks leaving the IT constraints behind. NotifyMDM enables healthcare organizations to seamlessly adopt mobility, while ensuring the privacy of PHI.

EXTEND THE MOBILE MANAGEMENT CAPACITIES

Healthcare was an early adopter of tablet and more and more **medical peripherals** such as ultrasound probes, mini printers and others are now available, thanks to Bluetooth and Wi-Fi connectivity. New processes including those medical peripherals are making things more complex and are disrupting the boundaries between IT and users.

NotifyMDM is not just controlling and alerting the administrators, it allows interacting remotely to **enable connectivity and to connect the related peripherals.**

Securing access and data is key for clinicians, NotifyMDM reinforce the basic MDM security level providing **Strong Authentication, Application security and a Secure Container for Email, PIM, and File Access.**

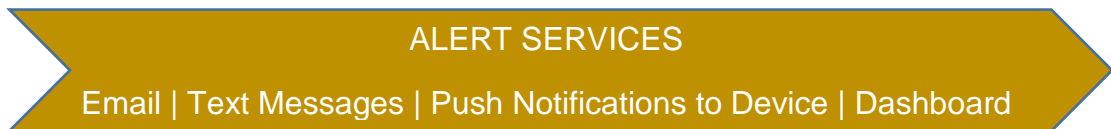

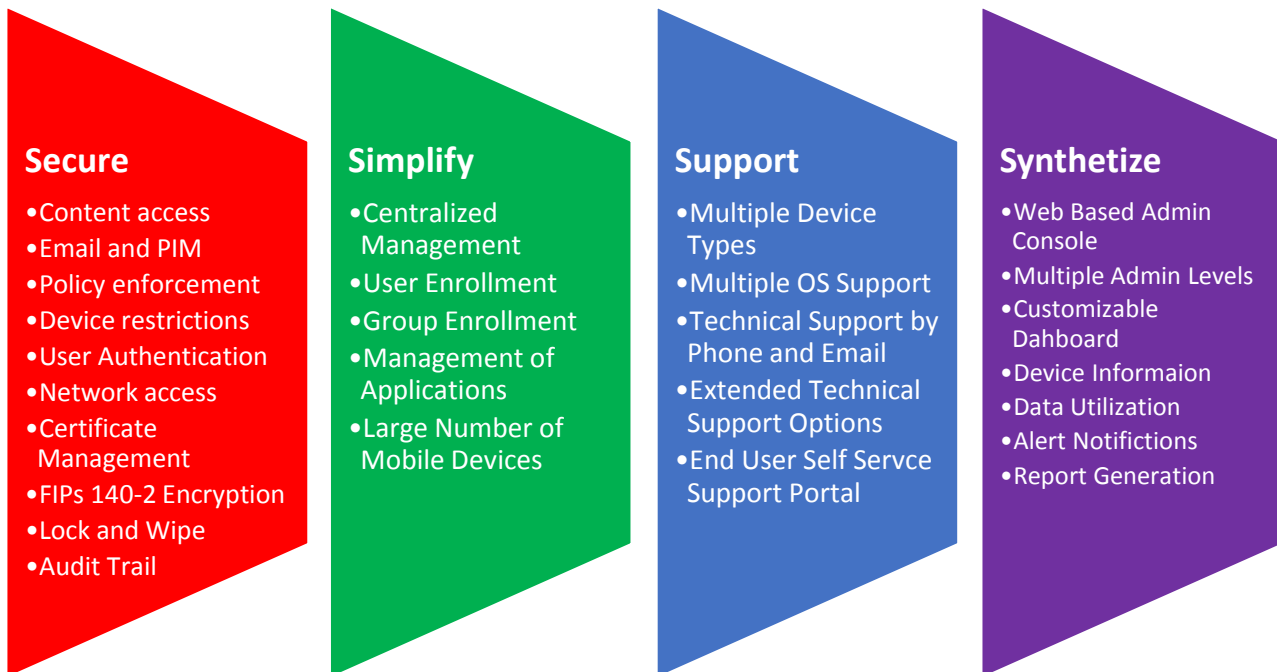

THE SOLUTION

Notify Mobile Device Management

The solution is designed to be simple, efficient, and affordable. NotifyMDM provides healthcare organizations an intuitive, user-friendly way of simplifying the complexities of supporting both organization owned and employee owned mobile devices.

NotifyMDM allows healthcare organizations of any size, real-time visibility and control over their full mobility landscape regardless of device operating system, liability, carrier, or email platform. NotifyMDM provides **Security, Simplicity, Support and Synthesis** to healthcare organizations.

NotifyMDM Fundamental Features

Device Control

- Centrally manage a multi-OS environment (iOS, Android, Windows Phone and Blackberry)
- Maintain a complete inventory of authorized devices, discover and restrict unauthorized devices
- Perform Remote Wipe, Lock, and Locate if a device is lost or stolen
- Perform full or selective wipe of data if an employee leave the organization, if there is a virus or breach, or if a device is decommissioned

Device Security

- Require mobile device login to verify user identity when remotely connecting to the corporate network
- Restrict new devices automatically until authorized to access the corporate network
- Require minimum password characters and password reset on a recurring basis
- Set devices to lock after a specified number of failed attempts as well as a specified amount of downtime

Policies

- Set corporate or individual liable (BYOD) policies with various levels of restrictions
- Customize policies for users or user groups based on various levels of access requirements
- Enforce time-based policies tailored to daily or weekly schedules
- Control access to Camera, Browser, Wi-Fi, iCloud, iTunes, YouTube, and more

Compliance

- Enforce jailbreak/root detection, device encryption levels, minimum OS versions, and more
- Block out-of-compliance devices from accessing corporate resources like email, apps and files
- Automate alerts to the IT administrator for out-of-compliance devices
- Provide audit trail of all role-based administrator activities

Email, Apps and Files

- Manage devices connecting to any email platform supported by ActiveSync
- Support for corporate email and PIM to isolate and protect from personal email and PIM
- Manage and control apps with the ability to remotely install or uninstall apps, as well as define whitelisted or blacklisted apps for users or user groups

Real-Time visibility

- Monitor user activity with real-time visibility into device statistics, user information, user trends, and systems alerts
- Track the latest status on battery life, memory level, signal strength, location, encryption status, and more
- Increase Help Desk efficiencies and troubleshooting with immediate visibility and transparency into the user's device

Delivery

- On-Premise
 - Support for VM
 - Windows based
- On-Demand (cloud)
 - SSAE-16 certified
 - 99.9% availability
 - Multi-tenant
